and all Sundays*

THE block of taxus pictured on the title page is part of a twenty-five acre field on a hillside in Hopkinton. The pond is used for irrigation. In the background are fields of buckwheat in full flower which we sow and plow in to condition the land for future plantings.

Large-scale production on about two hundred acres under soil conservation principles is necessary to keep the cost of the individual plants down and to assure vigorous specimens for our customers. With advice from the United States Soil Conservation Service we are planting our fields on the contour, steering runoff water into grass terraces and saving this water in ponds for summer use.

How to Reach Our Nurseries

THE main office of the Weston Nurseries, Inc., is located in the southern part of Weston just off Route 30 (Commonwealth Avenue out of Boston) four miles west of the intersection of Route 128. After crossing Wellesley Street, continue on Route 30 about $\frac{1}{2}$ mile to Winter Street, which is the first street on the left. The office and sales yard is about $\frac{1}{2}$ mile down Winter Street on the right.

From the Boston-Worcester Turnpike (Route 9) take Weston Road toward Weston at Wellesley Fells for $2\frac{1}{2}$ miles and turn left on Brown Street at the aqueduct.

In Hopkinton our office is located on Frankland Street just off Route 135. Part of the nurseries are on Route 135 on the right-hand side as you drive from Ashland toward Hopkinton. Signs will direct you up the hill to the sales grounds on the right.

Note: We are closed to business 12 to 12:45 p.m. daily for luncheon.

Evergreens

Few, if any, plantings are effective without the use of evergreen trees or shrubs. Their presence reinforces the entire planting in the esthetic sense, and without evergreens the effect desired in a landscape grouping is lost.

As backgrounds and windbreaks they have no equal. Every planting needs the weight and stability of an evergreen to contrast and shield the more dainty and picturesque flowering trees, shrubs, and perennials.

EVERGREENS are best grown in good loam with plenty of organic matter such as peat moss, well-rotted manure or compost worked into the soil to hold moisture and to encourage a healthy root action. They respond to fertilization. Well-rotted manure and dried manures are excellent. Castor Pomace, Bone Meal and other organic fertilizers are all excellent and long-lasting. Chemical fertilizers, such as 5-8-7, may be used to give quick action, applying about a handful for each plant, provided they are established for about a year and watered sufficiently.

When evergreens are used in a restricted area, such as in foundation plantings, they normally require an annual pruning to prevent overgrowth and to give character to the planting. This pruning is best done during spring or early in the summer to allow time for additional growth to cover any possible unsightliness of the cuts. Hedge shears usually create a formal effect while hand shears or a knife are used if one wishes to prune for a more natural effect.

The demand for the broad-leaved evergreens is increasing each year. Here is one class of plants that rises above all the others in the aristocratic sense. The marvelous foliage and flowers of our broad-leaved evergreens and the ability of these plants to flourish in New England make them the most preferred items in the plans of well-designed home gardens. Some of the broad-leaved evergreens are slightly more expensive because they are slower-growing during the early stages, but an investment in a broad-leaved evergreen is one that guarantees many years of gardening pleasure.

Since climatic conditions in New England are ideal for plants in this group, we highly recommend them for all conditions where shade predominates as well as in full sunlight. Profusion of flower color may be realized from early spring until late June by combining Rhododendron varieties with Japanese Andromeda, Mountain Andromeda, Drooping Leucothoe and Mountain Laurel. And for foliage contrast and along foundation walls where building lines are ugly, interplant with spreading Yews and Junipers. Our selection of broad-leaved evergreens represents a large percentage of the Hopkinton nursery and it is our belief that these plants are the finest to be had.

Soils for broad-leaved evergreens should be rich in organic matter and leaf-mold. Compost, peat moss, and well-rotted manure worked into the soil are beneficial. The broad-leaved evergreens are acid-loving plants and respond favorably to woods soil, where no lime has been used, as in cultivated fields.

Organic fertilizers are best for the broad-leaved evergreens. Castor Pomace is excellent. Fertilizer should be applied in early spring, if possible, although it is safe to fertilize until July. Fertilizing too late may make the plants grow too late in the season, and cause winter injury. Proper watering is essential.

Deciduous Shade and Ornamental Trees

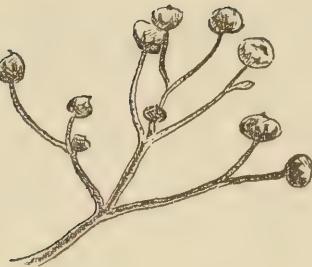

We grow a large number of shade and ornamental trees, as indicated by the following pages.

Good root systems and healthy well-pruned tops combine to make our trees desirable for ease in transplanting and after care.

Of particular interest to the small home-owner should be the flowering trees that require little care, and offer flowers, fruit, beautiful foliage and shade. We recommend Dogwoods, Magnolias, Flowering Crabs and Cherries as being particularly useful and ornamental on the small home grounds.

Hardy Ornamental Shrubs

It is interesting to note that many of the common shrubs in our everyday landscape are available to us because of the exacting efforts of early plant-hunting expeditions to distant corners of the world.

The growth of horticultural interest in America has necessitated broader cultivation of plant varieties and the development of new forms. The following listed plants are representative of the entire ornamental shrub group and individually have their place as specimens or as a part of the flowering shrub border. You will find them hardy and readily adjustable to your garden or home landscape and a never-ending source of pleasure in flower color and ornamental fruits.

All shrubs, except Azaleas and those marked B & B, will be dug bare-rooted and wrapped in moist hay or other material unless otherwise notified. During late spring and summer, when in leaf or flower, these shrubs should be balled and burlapped. The cost of balling and burlapping, 50¢ per plant, should be added to the catalogue price.

HARDY PERENNIALS have been a specialty with us for over thirty years. We raise a large variety of these plants in the open fields in Weston and pride ourselves on selling field-grown clumps that give our customers an almost immediate effect in their gardens.

Pictured above is a midsummer view of phlox and daylilies in one of our fields. In the background is our Weston sales yard and propagating greenhouses.

The President's cup was awarded to us by President John S. Ames of the Massachusetts Horticultural Society for "the most meritorious exhibit in the show."

The exhibition theme "Golden Gardens" was carried out in our exhibit, part of which is shown above. The yellow of the primroses, doronicums and azaleas, against a background of dogwood in a natural setting, forms a very pleasing garden border.

IT IS often said that the biggest value in perennial plants is the chrysanthemum. The tremendous bouquet from each plant remains in blossom for a long time during the cool autumn weeks.

Our chrysanthemums, some of which are pictured above, are pot-grown during spring and then planted out to be sold as field-grown clumps during the remainder of the season. We strongly recommend the planting of chrysanthemums in May or June so that they have the opportunity of filling in your planting in a natural manner by blossoming time. The varieties we raise have been tested by us to be outstanding for this area.

Vines and Climbing Plants

The average garden is seldom complete if it lacks the finishing touch of a vine to soften an unsightly arborway or fence corner.

Nothing in the plant realm provides a more rapid cover for harsh stone or brick walls, and the combination of flower, fruit and ornamental fall foliage compels their use somewhere in the landscape theme.

Perennials and Rock Garden Plants

During the past thirty years we have given particular attention to the growing of hardy perennials, and during these years we have tried and tested hundreds of varieties, both old and new. We have found that the plants in the following list are best suited for our New England gardens.

Our perennial gardens are adjacent to the office and parking area in Weston, and our customers take great delight in periodic visits to the nursery throughout the growing season to view the succession of blooms. A large number, in this way, discover their preferences and personally select their plants.

Our plants are field-grown, and consequently have vigorous root systems, which assure successful transplanting.

The plants are 50c. each, 3 of one variety \$1.35, 10 of one variety \$3.50, unless otherwise marked. 5 or more of one variety may be purchased at the 10 rate.

The asterisk (*) indicates varieties particularly well adapted for the Rock Garden.

The ultimate height of the plant is given in feet and inches.

The approximate time of flowering is given in months.

Hardy Chrysanthemums

One of the best investments in perennials is the chrysanthemum. The huge bouquet of flowers that last so long on every plant is ample reward for the casual care required in pinching the new growth until the middle of July and an occasional watering and feeding.

There are so many new varieties of chrysanthemum introduced each year that we are constantly screening out varieties that are inferior. The list below is one which we believe includes the best that is available in chrysanthemums. These plants are grown in Weston along with our extensive plantings of perennials.

Conditions of Sale

IT is to our own interest to see that only good and correctly labeled plants leave the Nursery, but we give *no guaranty*, express or implied, as to description, growth and success of any stock we sell, for it depends on correct planting, proper soil, weather conditions, and the general care of the plants.

We accept all orders upon the condition that they shall be void should injury befall the stock from frost, fire, hailstorm, or other causes over which we have no control.

Any errors made by us will be gladly rectified if notice is given within ten days after receiving the stock. If any plants are found to be misnamed, we will replace them the next planting season.

We sell five plants of the *same variety* at the rate of ten.

All *parcel post, express or freight charges are paid by the purchaser.* On orders packed for shipment there is a small additional charge for packing, at cost. (See order blank — page 71.)

Prices are subject to change without notice.

We reserve the right to make an additional charge for specimen plants selected in the field.

A certificate of State and Federal inspection for freedom from injurious insects (gypsy moths, Japanese beetles, etc.) or disease on our plants is available with every order.

TO THOSE CUSTOMERS who feel the need of assistance in planting their homes, we would like to suggest that they bring a snapshot of the front, sides or rear of their home when coming out to the nursery. We are unable to send men out to see the grounds of our customers, but may be able to help here at the nursery in solving many problems if we can see the situation from blueprints, rough drawings, or snapshots.

Our experience in designing and planting thousands of homes perhaps quite similar to yours may be useful to you.

We will plant any material that we sell; but due to the need of our entire staff in the work of growing plants in our increasing acreage, we cannot do grading, lawn work, etc.
